Present

Artificial Intelligence | SkillDzire

Projects

Market Basket Analysis using Apriori Algorithm

We have taken an business dataset ,done the preprocessing steps and found out which business was having more profit

Student Mental Health Assesment Usking K-Means

Analyzed student mental health data using Python, focusing on age, gender, major, year of study, CGPA, and mental health conditions. Cleaned and preprocessed data, conducted detailed visualizations with Seaborn and Matplotlib, and applied K-means clustering to identify patterns. Generated insights on depression, anxiety, and academic performance.
